

Lean Performing Team

The philosophy of Lean is *improvement through elimination of wastes* (non-value adding activities).

Implementing Lean in the organization requires cultural change.

We know organizational culture is rooted in its practices and values of the people. We understand it's the people who drives the improvements, and not the machines.

We believe that people and processes come together in many different value streams within your organization to create value for the customer.

That is why our Lean Manufacturing Deployment program is designed with people in mind. Our program is structured to deliver the *know-why* and *know-how* of Lean by engaging your people in Lean projects across the board.

Your team will learn by doing, and their learning experience will drive the cultural change towards Lean. Let us accompany your organization on this Lean journey.

LEAN DEVELOPMENT PROGRAM

LEAN TEAM BUILDER CAMP

An action oriented workshop for you to acquire Lean as a continuous improvement framework to increase profit with zero capital investment.

Objective

1. Establish a Lean culture in the organization that continuously drives out *wastes (muda)* from its processes.
2. Improve lead time, inventory turnover and quality.
3. Develop and standardize best shop floor practices in terms of workforce efficiency, equipment layout, material flow and cycle time.
4. Create well organized shop floor to support work standardization.
5. Promote congruence between departments via VSM projects.

Outcome

- Experience the philosophy of Lean with simulations and group activities
- Understand how smaller batch size allows for flexibility and faster lead time.
- Speed up your service or product delivery
- Identify and eliminate *wastes* using Lean tools such as Value Stream Map, 5S, and Visual Management
- Steer your team towards sustainable improvements with Lean KPI's.
